

CLI Agent Contradiction Register v0.1.1-hygiene

Contradiction, tension, duplication, red-line ambiguity, and release-readiness
register for the C-Governed CLI Agent Mesh package

Status Draft contradiction register v0.1.1-hygiene synchronized

Date 2026-05-17

Package C-Governed CLI Agent Mesh

Layer $c = a + b$ / SER / L4 / Agent Governance / CLI Worker Mesh / Defensive
Adaptation / Witness

Document class contradiction register / release-readiness register / package-control artifact

Assertion class C-A10 package-control artifact

Primary package index CLI_Agent_Package_Index_and_Reading_Order_v0_1.md

Primary boundary known tensions must be tracked before implementation, public release,
conformance claims, or deployment. Narrative coherence is not a substitute for
contradiction control.

0. Executive summary

Current synchronized draft state:

Hard contradictions found: 0
Architecture-level doctrine: coherent
v0.1.1 hygiene patch: applied at package-control document level
Previously missing package-control companions: resolved
Remaining release blockers: 5
Remaining implementation-readiness blockers: 6
Conformance-supported claim: not allowed
Recommended next work: controlled schema extraction handoff, not new doctrine expansion

This result means:

No current document requires agents to both do and not do the same load-bearing action.

It does **not** mean:

the package is release-complete;
the package is implementation-executed;
the package has complete extracted machine schemas;
the package has passed conformance tests;
the package has been legally reviewed;
the package can be safely published without public/restricted application.

The main diagnosis:

The architecture is coherent at draft level. v0.1.1 removes the largest hygiene gaps by adding readiness gates, raw evidence sidecar, AB/gate semantics, registry, local checker, release surface, schema object registry, semantic validator rules, and package index synchronization. The remaining risks are execution gaps: schema extraction, duplicate source resolution, applied redaction split, final repository placement, and conformance execution.

The most important control sentence remains:

CLI agents are workers.
They may execute bounded tasks.
They must not become will, memory, sovereignty, judge, release authority, incident authority, or retaliatory operators.

1. Corpus bridge set

1.1 Explicit bridge: $c = a + b$

CLI agents are part of b. They may extend operational reach, but they do not become c, do not replace a, and do not own continuity, memory, authority, or final judgment.

1.2 Quiet bridge I: cybernetics

The package now has multiple control surfaces: task contract, permission, registry, sandbox, witness, review, memory gate, release gate, local checker, and semantic validators. These are not competing authorities. They are nested gates.

1.3 Quiet bridge II: information theory

The v0.1.1 patch reduces ambiguity by converting previously missing concepts into named documents and object families. Remaining ambiguity is now localized in extraction and implementation tasks rather than doctrine.

1.4 Earth paragraph

The cabinet now has labels. That does not mean electricity is on, inspected, and signed off. It means the next technician does not have to guess which breaker is the server, which is the bathroom, and which must never be touched without calling the owner.

2. Load-bearing invariants

ID	Invariant	Current status
INV-001	CLI agents are workers inside b, not c, not a, not sovereign subjects.	stable
INV-002	Capability is not permission.	stable
INV-003	Registration is not task authorization.	stable; registry profile reinforces
INV-004	Material tasks require task contracts.	stable
INV-005	Material writes require sandbox/worktree/staging boundary.	stable; duplicate SWP source still needs file-level resolution
INV-006	Agents must not self-approve material work.	stable
INV-007	Agents must not write directly to c memory.	stable
INV-008	Memory/experience/immunity promotion requires memory gate.	stable
INV-009	Privileged transitions require witness or fail-closed behavior.	stable
INV-010	Secrets are denied by default and must not be ordinary prompt/log/witness material.	stable; SCDP available
INV-011	Cloud context is not private by default.	stable
INV-012	Defensive emulation remains sandboxed/authorized and must not become live retaliation.	stable; redaction required
INV-013	Incident response is defensive containment and lawful handoff, not hack-back.	stable; redaction required
INV-014	Quorum is evidence, not sovereignty.	stable
INV-015	Human gate is required for high-risk irreversible, legal, core, release, or incident-sensitive actions.	stable; UI surface deferred
INV-016	Rollback must not erase witness history.	stable
INV-017	Red-line failures revoke or block conformance claims.	stable
INV-018	Schema validity is necessary but not sufficient.	stable; semantic validator profile added
INV-019	Release visibility is not release authority.	stable; release public surface profile added

3. Resolved v0.1.1 contradiction/hygiene items

ID	Previous issue	Resolution	Status
CR-HYG-001	README missing or stale.	README synchronized.	RESOLVED
CR-HYG-002	Release notes stale.	Release notes synchronized with v0.1.1 status.	RESOLVED
CR-HYG-003	Package index missing from local set.	New CLI_Agent_Package_Index_and_Reading_Order_v0_1.md created.	RESOLVED
CR-HYG-004	Public/restricted split profile missing.	Public redaction profile exists; actual application remains.	PARTIALLY_RESOLVED
CR-HYG-005	Raw evidence exception repeated.	Raw Evidence Sidecar profile exists and becomes controlling sidecar layer.	RESOLVED
CR-HYG-006	AB/gate semantics ambiguous.	AB/gate profile created; B alone grants no authority.	RESOLVED
CR-HYG-007	Registry absent.	Registry profile created; registry is not permission.	RESOLVED
CR-HYG-008	Local checker role underspecified.	Local checker profile created; checker is not judge/release authority.	RESOLVED
CR-HYG-009	Release public surface absent.	Release surface profile created.	RESOLVED
CR-HYG-010	Schema object inventory absent.	Schema Object Registry created and synchronized.	RESOLVED
CR-HYG-011	Semantic validators absent.	Semantic Validator Rules created.	RESOLVED
CR-HYG-012	SCDP/CTM/Package Index marked missing in SOR.	Corrected to source-available.	RESOLVED

4. Current hard contradiction scan

4.1 Result

Current hard contradictions found: 0

4.2 Explanation

No current profile appears to require a load-bearing behavior that another current profile forbids.

The package consistently says:

- agents are workers, not sovereigns;
- task contracts are required;
- permissions are scoped;
- registry records eligibility, not authority;
- sandbox/worktree is required for material writes;
- AB/apply flags do not create authority by themselves;
- witness is required for privileged transitions;
- raw evidence is a restricted sidecar, not a witness dump;
- memory gate blocks direct memory writes;
- quorum does not replace c;
- defensive emulation must not become retaliation;
- incident response must not become hack-back;

- secrets/cloud data are denied by default for sensitive material;
- red-line behavior blocks or revokes claims.

5. Remaining release blockers

ID	Type	Severity	Location	Issue	Required patch	Status
CR-REL-001	REL/DH	S4	Package-wide	Canonical file inventory must be checked in actual repository path.	Confirm default-branch visible files and canonical filenames.	OPEN
CR-REL-002	REL/DH	S4	SWP source	Duplicate sandbox/worktree source variant may exist.	Declare canonical SWP source before extraction/release.	OPEN
CR-REL-003	REL/RED	S4	Public package	Public/restricted split exists but is not yet applied to repository release surface.	Apply PRP + RPS to actual package.	PARTIALLY_RESOLVED
CR-REL-004	REL	S4	GitHub/site/archive	Final repository placement and discoverability must be confirmed.	Put all files in intended path and check from main/default branch.	OPEN
CR-REL-005	REL	S4	Artifacts	PDFs/SHA/release manifest not generated after freeze.	Generate only after final Markdown freeze.	OPEN

6. Remaining implementation blockers

ID	Type	Severity	Location	Issue	Required patch	Status
CR-IMPL-001	SCHEMA	S4	schemas/	P0 JSON schemas not extracted.	Extract from JSEP + SOR.	OPEN
CR-IMPL-002	SCHEMA	S4	schemas/	SCHEMA_INDEX.json missing.	Generate after P0 schemas.	OPEN
CR-IMPL-003	SCHEMA	S3	validator/	Semantic validator rules exist but are not executable.	Implement or create checker contract.	PARTIALLY_RESOLVED
CR-IMPL-004	CONF	S4	conformance/	No conformance runner or evidence packets.	Build runner after schemas/fixtures.	OPEN
CR-IMPL-005	CONF	S4	test runs	No actual test runs.	Execute after local checker and fixtures.	OPEN
CR-IMPL-006	IMPL	S3	Codex handoff	Codex task contract not yet written.	Create restricted schema-extraction handoff.	OPEN

7. Soft tensions still tracked

ID	Type	Severity	Location	Issue	Current handling	Status
CR-ST-001	TA	S3	WEP/SCDP/MGP/RES	Retention class families still need harmonization.	Keep profile-local for now; future retention/decay profile.	DEFERRED
CR-ST-002	DR	S3	SWP/RFP/WEP/MGP/RES	Quarantine vocabulary appears in multiple profiles.	RFP controls generic freeze/quarantine; RES controls evidence sidecar.	PARTIALLY_RESOLVED

ID	Type	Severity	Location	Issue	Current handling	Status
CR-ST-003	DR	S3	QRP/ERS	Executor/reviewer separation duplicated.	ERS controls role separation; QRP composes review.	RESOLVED
CR-ST-004	DR	S3	MGP/DEB	Defensive immunity appears in both.	DEB sources defensive candidate; MGP promotes/rejects.	RESOLVED
CR-ST-005	ST	S3	SCDP/HSP/SWP	Cloud sandbox can be mistaken for confidentiality.	SCDP controls: cloud context is boundary crossing.	RESOLVED
CR-ST-006	JG	S3	IRP/SCDP	Legal handoff remains generic.	Future legal handoff profile.	DEFERRED
CR-ST-007	UX	S3	gates/UI	Human gate lacks UI-state profile.	Future UI State Surface profile.	DEFERRED
CR-ST-008	CLOUD	S3	provider profiles	Provider-specific assumptions are generic.	No provider-specific claim until researched.	DEFERRED

8. Precedence and control-surface rules

1. Root protocol controls doctrine.
2. Readiness Gate controls claim status.
3. Package Index controls navigation and canonical status.
4. AB/Gate Semantics controls A/B, dry-run, apply, enforce, confirm, arm, persistent, and runner semantics.
5. Registry controls eligibility records, not task permission.
6. Task Contract describes task scope.
7. Permission Model defines active permission semantics.
8. Sandbox/Worktree controls execution boundaries.
9. Witness controls boundary event records.
10. Raw Evidence Sidecar controls restricted evidence custody.
11. Memory Gate controls memory/experience/immunity promotion.
12. Rollback/Freeze controls hold/freeze/quarantine/revoke/rollback/re-entry.
13. ERS controls role-separation details.
14. QRP controls multi-agent review composition.
15. DEB controls defensive emulation source boundary.
16. IRP controls incident triage/recovery/handoff.
17. SCDP controls secrets/cloud/data boundary.
18. RPS/PRP control public/restricted release surface.

19. SOR/JSEP/SVR control schema extraction and semantic validation.
20. CTM/CFP control conformance model and safe fixtures.

9. Red-line consistency check

The package consistently prohibits:

```

hack-back
live external counter-operation
malware behavior
credential theft
covert persistence
evasion
unauthorized scanning
unauthorized exploitation
destructive external action
autonomous retaliation
secret exfiltration
cloud upload of secrets by default
direct memory write by agents
identity/core mutation by agents
agent self-approval
witness tampering
release/publication without required gate
conformance claims without evidence

```

Terms requiring careful public wording:

Term	Required wording
mirror	sandboxed mirror simulation only
canary	non-harmful, non-retaliatory, internal/synthetic
immunity	internal block/filter/quarantine/review, not attack
garage	containment and study, not weaponization
incident response	local defense and lawful handoff
quorum	evidence, not sovereignty
apply	controlled mutation only after gates; not authority by itself
registry	eligibility record, not permission

10. Suggested contradiction tests

Test ID	Question	Expected answer
CT-001	Does any file allow direct memory write by agent?	no
CT-002	Does any file allow live external counter-operation?	no
CT-003	Does any file allow self-approval for material output?	no
CT-004	Does any file treat cloud as private by default?	no
CT-005	Does any file allow secrets in prompts/logs/witness by default?	no
CT-006	Does any file allow quorum to override c gate?	no
CT-007	Does any file allow incident repair to destroy evidence?	no
CT-008	Does any file allow rollback to erase witness history?	no

Test ID	Question	Expected answer
CT-009	Does any file let conformance pass on declaration alone?	no
CT-010	Does any file let AB_MODE=B authorize durable action alone?	no
CT-011	Does any file let registry status create task permission?	no
CT-012	Does any file expose raw evidence as public witness content?	no

11. Current conclusion

11.1 Facts

- The package has a coherent root doctrine.
- No hard contradiction is currently registered.
- v0.1.1 companion files now close the main missing-document gaps.
- Source availability for SCDP, CTM, and Package Index is resolved.
- Schema extraction, validator execution, conformance runs, release surface publication, and artifact hashing are not yet complete.

11.2 Interpretation

The package is now **document-hygiene synchronized**, but not yet **release-complete** or **implementation-executed**.

The next risk is no longer “missing conceptual file”.

The next risk is premature implementation or publication before schemas, validators, redaction, and release surface checks are executed.

11.3 Action recommendation

Proceed to controlled Codex handoff only for:

```
canonical filename inventory
P0 schema extraction
SCHEMA_INDEX.json
semantic validator stubs
local checker dry-run
no publish
no tag
no conformance claim
memory=off
auto_ingest=false
```

12. Closing rule

A contradiction register is not a decoration at the end of a package.

It is a pressure test.

Final rule:

```
If two files create two authorities,
one of them must yield.
```

If one file opens a red line,
the package must close it before release.
